

Proof of Signal - Certificate of Authenticity

This project uses a unique validation mechanism called 'Proof of Signal', based on the logical transmission and validation of numbered signals and symbolic rewarding of correct reactions.

Initial launch IPFS CID:

bafybeibyrukhdfkbrmfrf7hocnftk7c4b5sie7a52funkiqwit6omxkxa

Official start date of the network and reward validation: August 1, 2025

Until this date, the platform allows open access and free training for all users. Anyone can test and validate signals, but rewards will only be distributed after the official start date.

Any user can verify the authenticity of the project by accessing the above CID through any public IPFS gateway (for example: <https://ipfs.io/ipfs/bafybeibyrukhdfkbrmfrf7hocnftk7c4b5sie7a52funkiqwit6omxkxa/>).

This method ensures transparency, integrity, and proof of priority for the Proof of Signal idea, first implemented on clandestinlanding.com.
